

Gulf Crisis Supply Intelligence

Weekly Situation Report · May 19, 2026 · Data pipeline last run: 2026-05-19T07:26:21.276865+00:00

GEOPOLITICAL STATUS

Crisis Context (as of 2026-04-16): Mine clearance N/A% complete — IN PROGRESS. Diplomatic status: CEASEFIRE COLLAPSED. Mine clearance — not diplomacy — remains the binding constraint on recovery speed.

CURRENT MARKET VIEW

Crisis at maximum severity: Hormuz at 3.8% of normal, net crude gap 6.9 Mb/d after bypass and SPR offsets. Asia faces acute crude shortage (CRITICAL); Europe faces critical LNG deficit (CRITICAL). Transit recovery underway (recovering slowly) but mine clearance remains the binding constraint on normalisation speed.

HEADLINE METRICS

3.8% Hormuz Transit Index RECOVERING SLOWLY	ELEVATED LNG Market State HIGH	6.93 Mb/d Net Crude Gap after bypass + SPR	36.6% EU Gas Storage AMBER
--	---	---	---

LNG MODULE — KEY NUMBERS

Metric	Value	Metric	Value
JKM Price	\$17.07/MMBtu	US LNG Utilization	113.6%
TTF Price	\$16.34/MMBtu	Routing Signal	NEUTRAL
JKM-TTF Spread (7d avg)	\$1.22/MMBtu	EU Storage Days Deficit	21.0 days

VESSEL MIX — CURRENT VS PRE-CRISIS BASELINE (2025)

Vessel Type	Today	Baseline (2025)	% of Normal
Tanker	2	53.1	3.8%
Container	0	17.7	0.0%
Dry Bulk	2	14.7	13.6%
RoRo	0	3.4	0.0%
General Cargo	0	4.7	0.0%
Total	4	93.7	4.3%

Charts — Market Intelligence

Visual summary of transit disruption, LNG price dynamics, and European gas storage.

Regional Risk & Trend Extrapolation

Supply gap model output and short-term trend projections.

REGIONAL SUPPLY GAP — CURRENT STATE

Region	Crude Gap (Mb/d)	Crude Risk	LNG Gap (Bcf/d)	LNG Risk
Asia	5.54	RED	9.35	AMBER
Europe	0.28	GREEN	1.04	RED
US	0.00	GREEN	0.00	GREEN

TREND EXTRAPOLATION (NOT A FORECAST)

■ TREND EXTRAPOLATION — NOT A FORECAST. Based on current transit recovery rate and static bypass/SPR assumptions.

Timeframe	Transit (% normal)	Net Crude Gap (Mb/d)	Asia Gap (Mb/d)	Europe Gap (Mb/d)
Current (May 19)	3.8%	6.93	5.54	0.28
+2 weeks	11.4%	5.78	4.63	0.23
+4 weeks	19.1%	4.64	3.71	0.19

KEY ASSUMPTIONS

- Normal Hormuz crude flow: 15.0 Mb/d (IEA Factsheet, Feb 2026)
- Bypass pipeline capacity: 4.5 Mb/d midpoint (IEA range 3.5–5.5 Mb/d)
- IEA SPR release: 3.0 Mb/d announced rate (actual Apr 2026: ~2.1 Mb/d)
- Destination shares — Crude: Asia 80%, Europe 4%, Other 16%
- Destination shares — LNG: Asia 90%, Europe 10%
- Vessel-type split unavailable on free AIS tier — same pct_of_normal applied to crude and LNG
- Asia risk labels are gap-based proxy estimates (no free-tier Asian storage data)

DATA SOURCES

Tanker/Transit: IMF PortWatch API — chokepoint6 (Hormuz) daily transit counts

LNG Prices: yfinance — JKM futures (LNG=F), TTF futures (TTE=F)

LNG Exports: EIA Open Data API — US terminal monthly volumes (6-wk lag)

EU Gas Storage: GIE AGSI+ API — EU aggregate daily storage levels

Supply Gap Model: IEA Hormuz Factsheet (Feb 2026) + SPR IEA collective action data
